Jira Laboratory Manual: Practicals 1 to 4

Introduction and Conventions

This manual gives click-by-click procedures for four Jira Cloud practicals, from account creation to issue management, using one running project: the **Learning Management System (LMS)**.

Conventions used throughout

- UI elements (buttons, menus, modal titles, fields) are written in **bold**, for example click **+ Create**.
- Navigation paths use the arrow form: **Space settings** > **People**.
- Values to type are written in `monospace`.
- Every step that changes the screen is followed by a screenshot callout.
- Jira Cloud's interface changes often. Newer builds say **Space** where older builds say **Project**, and **Work item** where older builds say **Issue**. The two names mean the same thing here.

Common prerequisites for all four practicals

Requirement	Detail
Browser	Google Chrome (latest version)
Account	A personal Gmail ID for signing in to Atlassian
Internet	Stable connection throughout the session
Plan	Jira Cloud Free plan is sufficient
Second and third accounts	Two other email IDs (classmates or your own alternate IDs) for Practical 2

Practical map

No.	Title	Parts
1	Jira Setup and Project Creation	A: Account and dashboard, B: Company-managed Kanban space, C: Space details
2	Team Creation and Role Assignment	A: Add team members, B: Assign roles
3	Issue Types and Configuration	A: Issue types, B: Components and versions
4	Issue Management	A: Issue under an Epic, B: Assignee, priority, due date

Practical 1 must be completed first. Practicals 2 to 4 reuse the LMS space it creates.

Practical 1: Jira Setup and Project Creation

Part A: Create a Jira Cloud Account and Explore the Dashboard

1. Aim / Objective

To create a Jira Cloud account using a Google (Gmail) identity, complete the onboarding wizard, and become familiar with the default dashboard gadgets.

2. Prerequisites and Tooling

- Google Chrome and an active Gmail ID.
- No prior Atlassian account is needed. Authentication is through **Google**.
- Navigation path: Google Search > Atlassian Jira home page > **Google** sign-up > onboarding wizard.

3. Step-by-Step Execution Procedure

1. Open **Google Chrome**. In the address bar or Google search box, type `jira` and press **Enter**.

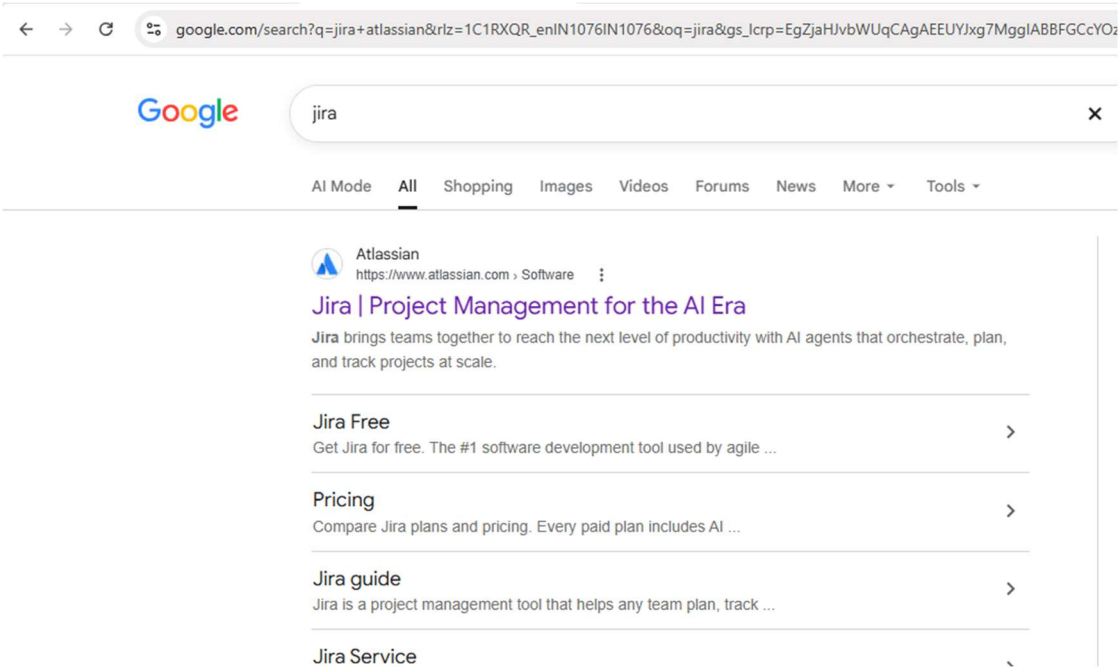

Figure 1. Screenshot from the provided Jira Practical document.

2. Click the Atlassian result titled **Jira | Project Management for the AI Era**. The Jira home page opens.

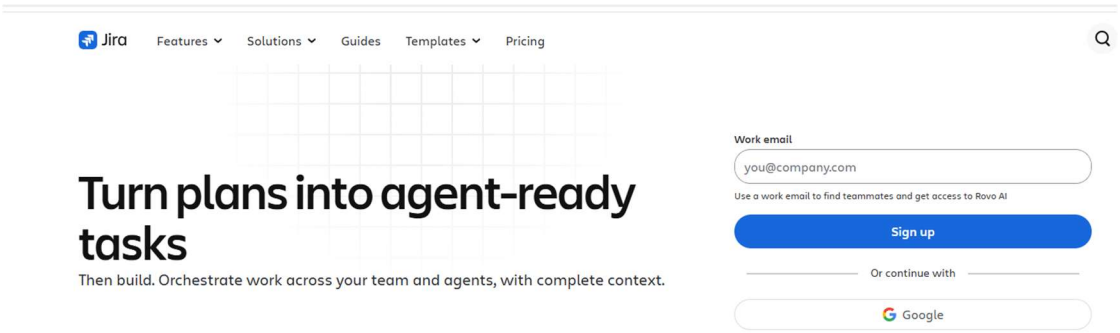

Figure 2. Screenshot from the provided Jira Practical document.

3. On the right of the page, click **Google** (below **Or continue with**).
4. In the Google account chooser, select your Gmail ID (or type it and click **Next**, then enter the password).
5. If Atlassian asks you to confirm account creation, review the **Create your account** screen and click **Continue**.

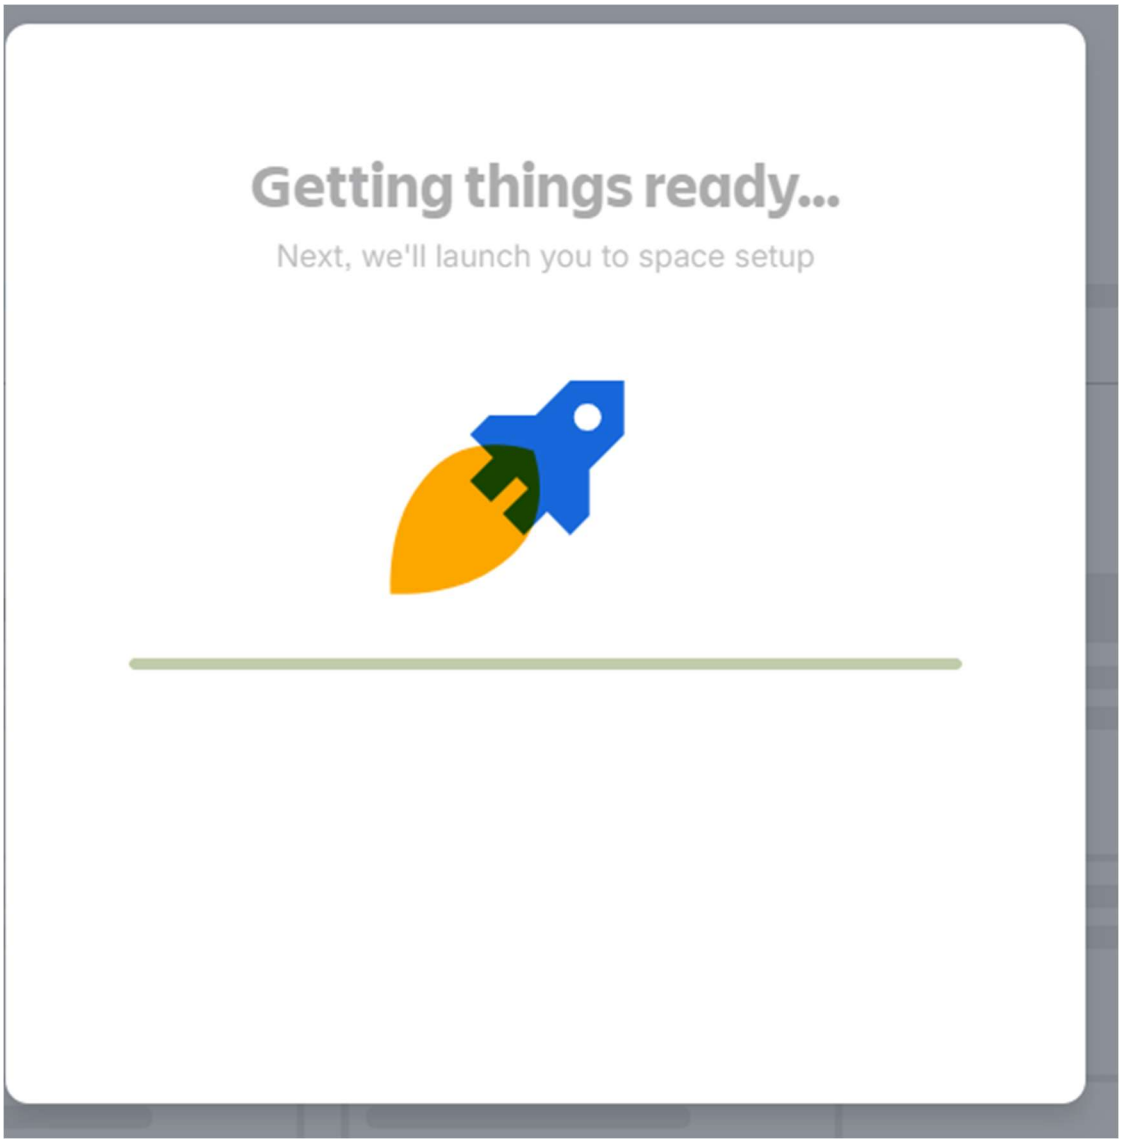

Figure 3. Screenshot from the provided Jira Practical document.

6. Wait for the **Getting things ready...** loading screen (rocket graphic, text "Next, we'll launch you to space setup") to finish.

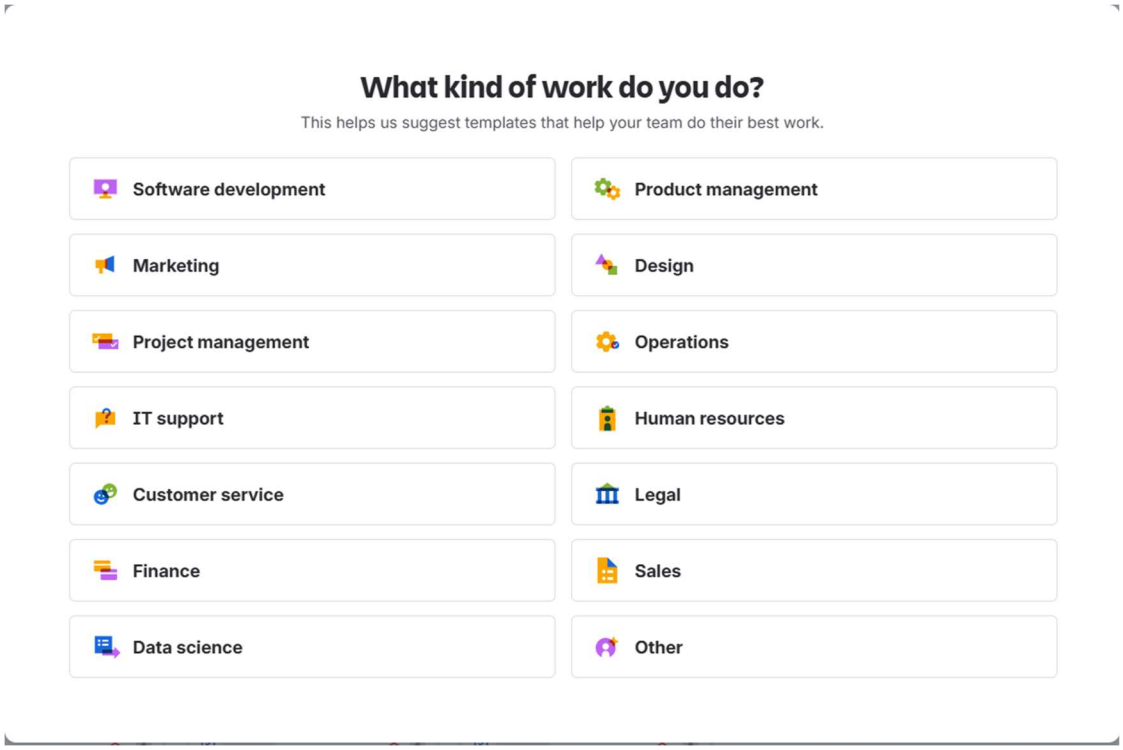

Figure 4. Screenshot from the provided Jira Practical document.

7. On the **What kind of work do you do?** screen, click **Project management**.

.

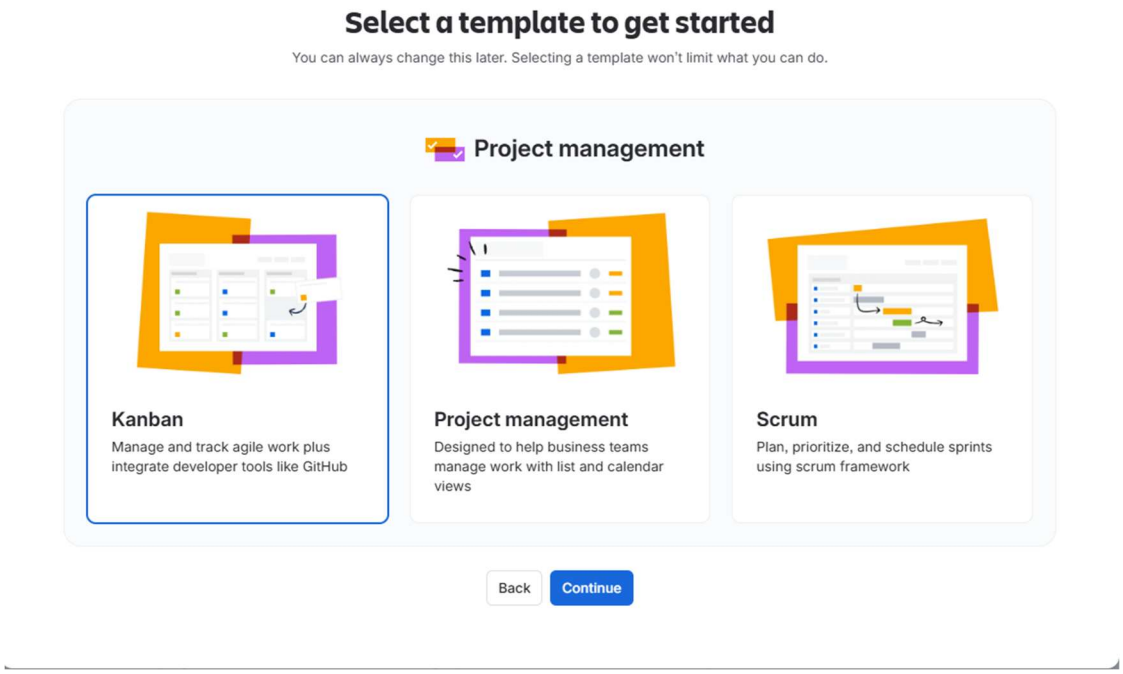

Figure 5. Screenshot from the provided Jira Practical document.

8. On the **Select a template to get started** screen, click the **Kanban** card, then click **Continue**.

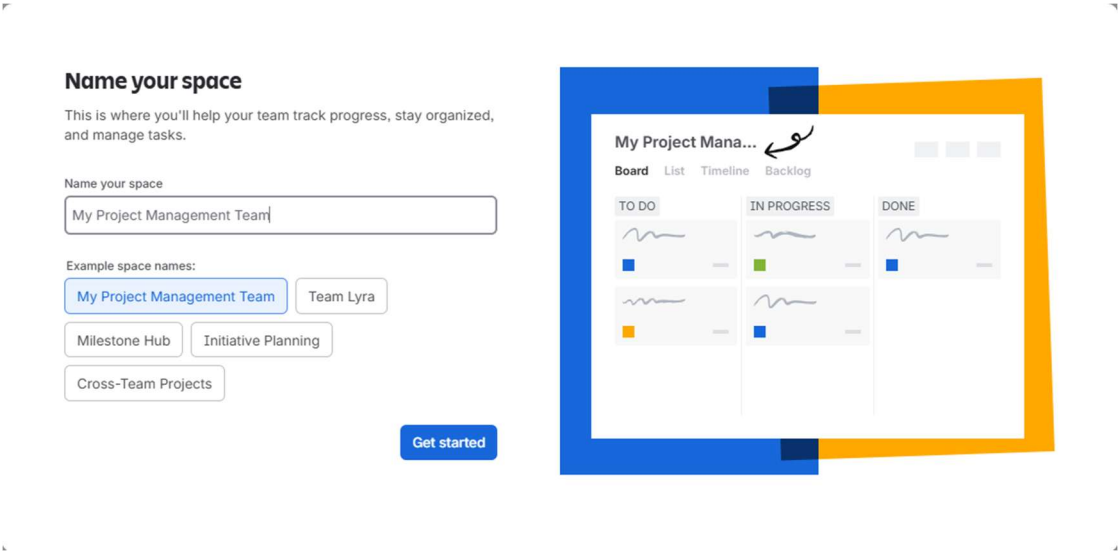

Figure 6. Screenshot from the provided Jira Practical document.

9. On the **Name your space** screen, clear the suggested name and type the space name from the data table below. Click **Get started**.

> ***[Screenshot Required]**: "Name your space" screen with the typed name in the **Name your space** field and the live board preview on the right.*

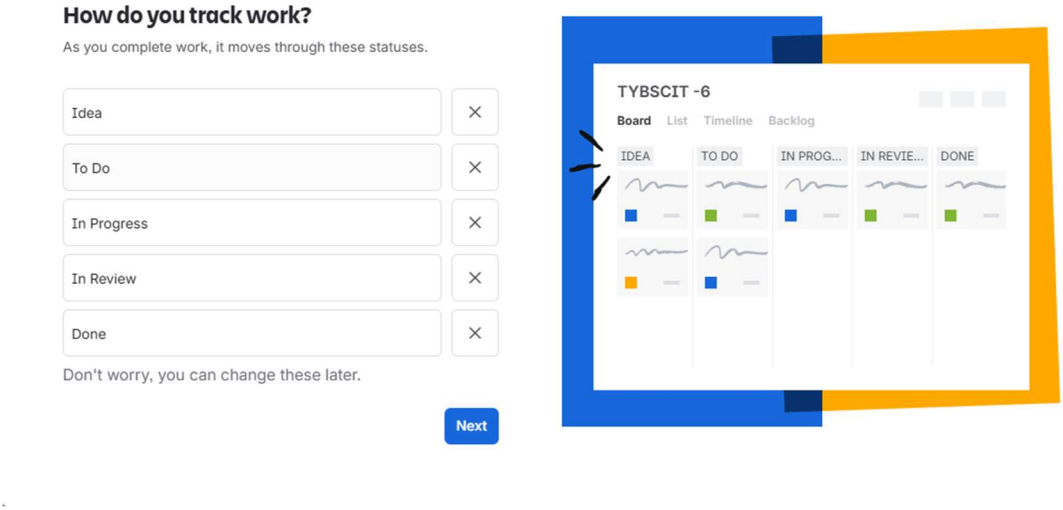

Figure 7. Screenshot from the provided Jira Practical document.

10. On the **How do you track work?** screen, confirm that the five statuses listed in the data table appear in order. Click **Next**.

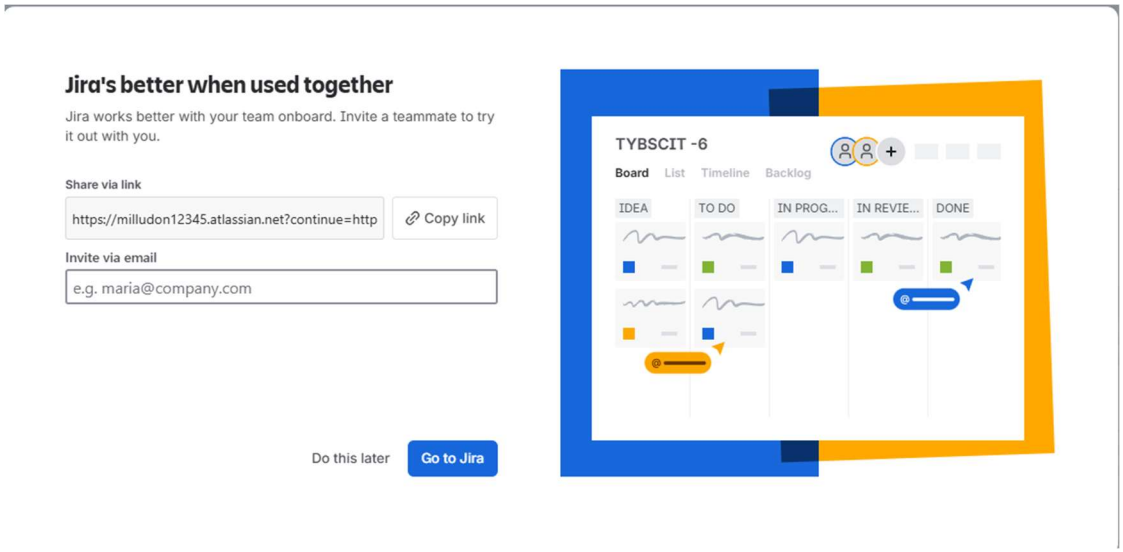

Figure 8. Screenshot from the provided Jira Practical document.

11. On the **Jira's better when used together** screen, do not invite anyone now. Click **Go to Jira** (or **Do this later** first, if shown).

> ***[Screenshot Required]**: The invite screen with the **Share via link** box, the **Invite via email** field left empty, and the **Go to Jira** button.*

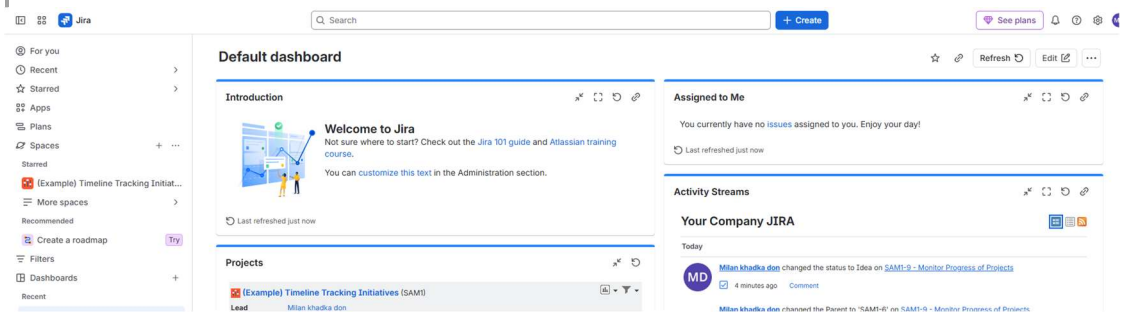

Figure 9. Screenshot from the provided Jira Practical document.

12. The **Default dashboard** loads. Explore the gadgets in this order:
    a. **Introduction**: welcome text and links to the Jira 101 guide.
    b. **Projects** (or **Spaces**): list of spaces you can access, with the Lead column.
    c. **Assigned to Me**: your open work items. It shows "You currently have no issues assigned" on a new account.
    d. **Activity Streams**: recent changes across spaces, with timestamps.
13. In the left sidebar, hover over **For you**, **Recent**, **Starred**, **Spaces** and **Dashboards** to see how navigation is organised.

> ***[Screenshot Required]**: The full **Default dashboard** with the sidebar visible and the **Introduction**, **Projects**, **Assigned to Me** and **Activity Streams** gadgets all in view.*

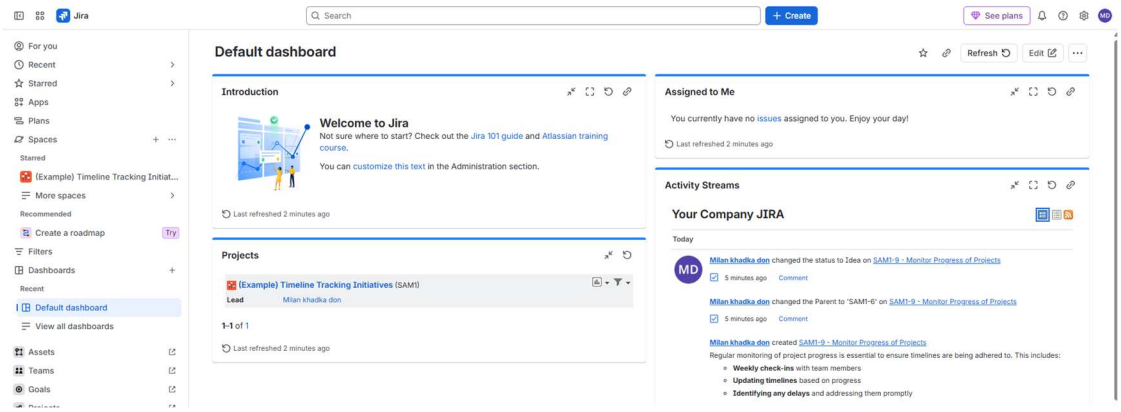

Figure 10. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Screen	Field	Value
Sign-up	Authentication method	**Google** (your Gmail ID)
What kind of work do you do?	Work category	`Project management`
Select a template	Template	`Kanban`
Name your space	Name your space	`Learning Management System`
How do you track work?	Status 1 to 5	`Idea`, `To Do`, `In Progress`, `In Review`, `Done`
Invite teammates	Invite via email	Leave blank (skip)

5. Expected Output and Verification

- Your Atlassian account exists and you are signed in with the Gmail ID.
- A Jira site address of the form `https://<your-site>.atlassian.net` is shown in the browser.
- The **Default dashboard** shows the **Introduction**, **Projects**, **Assigned to Me** and **Activity Streams** gadgets.
- The first space created by onboarding is listed under **Spaces** in the sidebar.

Part B: Create a Company-Managed Kanban Project

1. Aim / Objective

To create a company-managed Kanban space named *Learning Management System* with the key `LMS`, and open its Kanban board.

2. Prerequisites and Tooling

- Completed Part A and signed in to Jira on Chrome.
- Permission to create spaces (the site creator has this by default).
- Navigation path: sidebar **Spaces** > **+** > **Create space**.

3. Step-by-Step Execution Procedure

1. From the **Default dashboard**, in the left sidebar next to **Spaces**, click the **+** icon.

> ***[Screenshot Required]**: Sidebar with the **+** next to **Spaces** highlighted.*

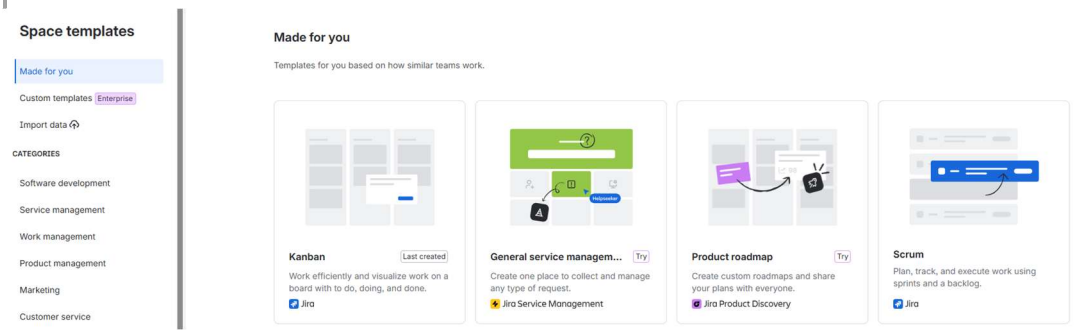

Figure 11. Screenshot from the provided Jira Practical document.

2. Click **Create space**. The **Space templates** page opens with the **Made for you** category selected.

> ***[Screenshot Required]**: "Space templates" page listing **Kanban, General service management, Product roadmap** and **Scrum** cards.*

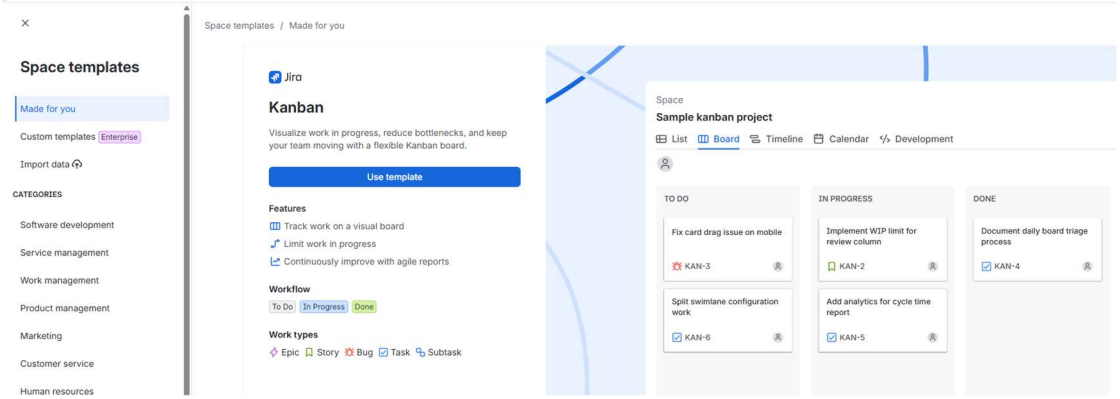

Figure 12. Screenshot from the provided Jira Practical document.

3. Click the **Kanban** card. The template detail panel shows its features, workflow (To Do, In Progress, Done) and work types.
4. Click **Use template**.

> ***[Screenshot Required]**: Kanban template detail page with the **Use template** button highlighted.*

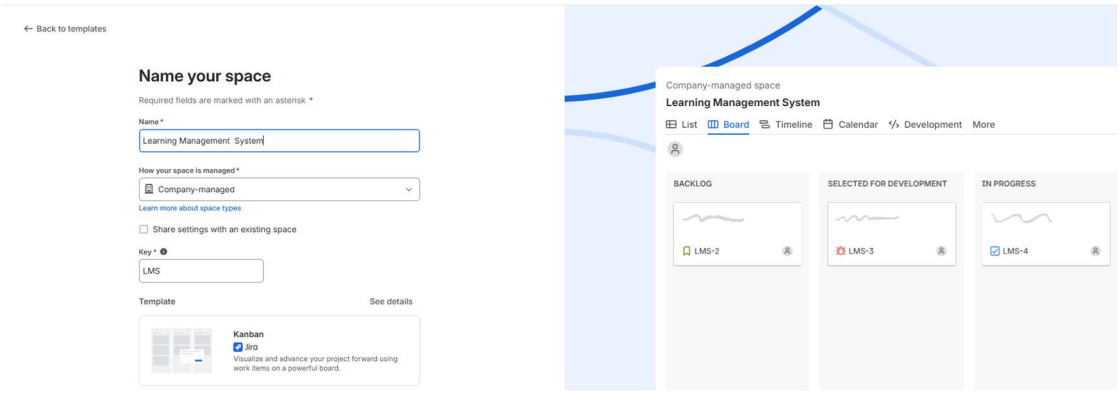

Figure 13. Screenshot from the provided Jira Practical document.

5. On the **Name your space** screen, in the **Name** field type `Learning Management System`.
6. Open the **How your space is managed** dropdown and select **Company-managed**.
7. Check that the **Key** field shows `LMS` (auto-generated). Leave **Share settings with an existing space** unticked.
8. Click **Next**.

> ***[Screenshot Required]****: "Name your space" form with Name = Learning Management System,* ***Company-managed*** *selected, Key = LMS and the Kanban template card shown.*

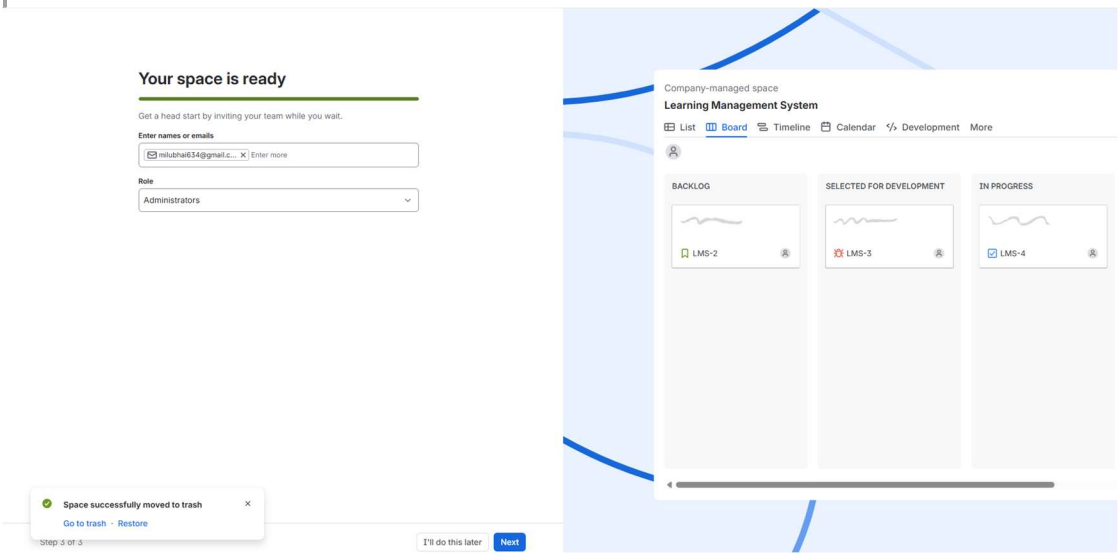

Figure 14. Screenshot from the provided Jira Practical document.

9. On the **Your space is ready** screen, do not enter emails now. Click **I'll do this later**. (Team invitations are covered in Practical 2.)

> ***[Screenshot Required]****: "Your space is ready" screen with the* ***I'll do this later*** *button highlighted.*

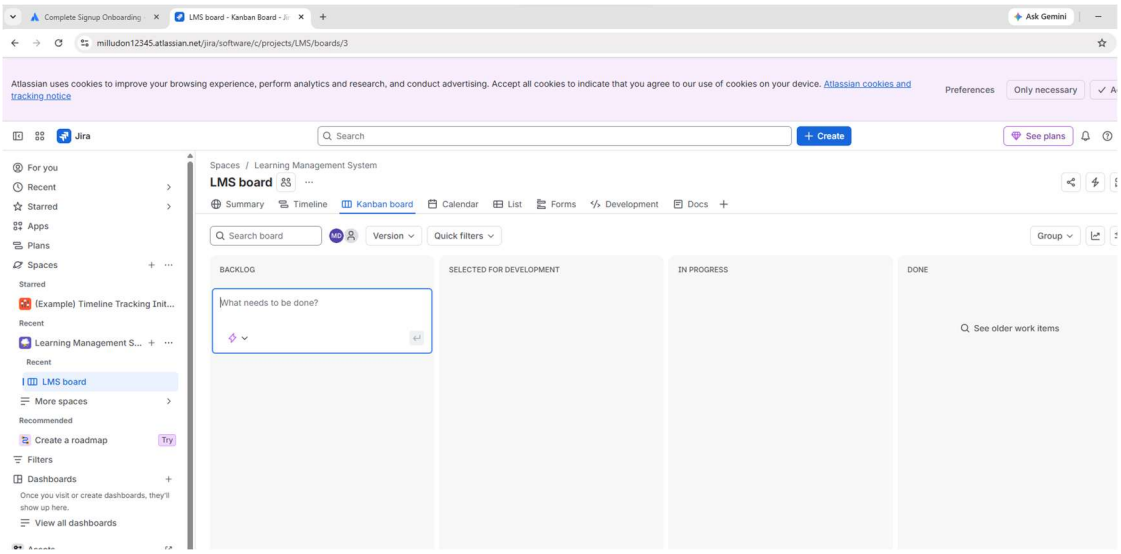

Figure 15. Screenshot from the provided Jira Practical document.

10. The **LMS board** opens. Confirm the breadcrumb **Spaces / Learning Management System** and the tab bar: **Summary**, **Timeline**, **Kanban board**, **Calendar**, **List**, **Forms**, **Development**, **Docs**.

> ***[Screenshot Required]**: The empty LMS Kanban board with columns **BACKLOG**, **SELECTED FOR DEVELOPMENT**, **IN PROGRESS** and **DONE**, and the breadcrumb visible.*

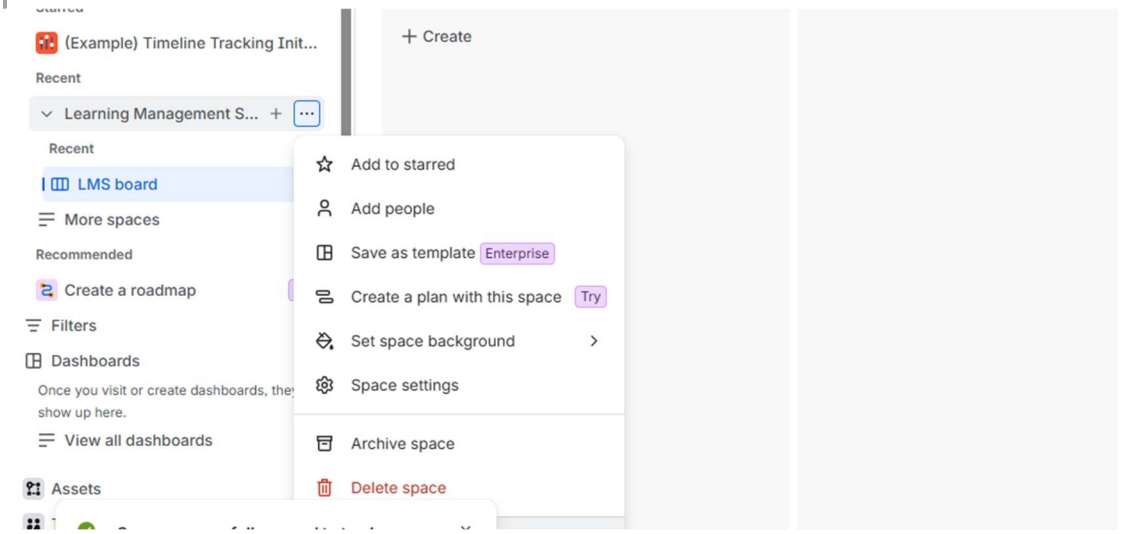

Figure 16. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Field	Value
Template	`Kanban`
Name	`Learning Management System`
How your space is managed	`Company-managed`

Field	Value
Key	`LMS` (auto-generated, do not edit)
Invitations	Skipped (**I'll do this later**)

5. Expected Output and Verification

- **Learning Management System** appears under **Spaces** in the sidebar, with **LMS board** beneath it.
- The browser URL contains `/projects/LMS/boards/`.
- The board is empty and its columns come from the Kanban template.
- The space type label reads **Company-managed**.

Part C: Configure Project Details

1. Aim / Objective

To open the space settings of the LMS space, review its general details, and save any changes.

2. Prerequisites and Tooling

- Completed Part B. You must be a space **Administrator**.
- Navigation path: sidebar space name > **...** > **Space settings** > **Details**.

3. Step-by-Step Execution Procedure

1. In the left sidebar, hover over **Learning Management System** under **Recent** (or **Spaces**) and click the **...** (more actions) icon.

> ***[Screenshot Required]****: Sidebar with the **...** menu open, showing Add to starred, Add people, Save as template, Create a plan with this space, Set space background, **Space settings**, Archive space, Delete space.*

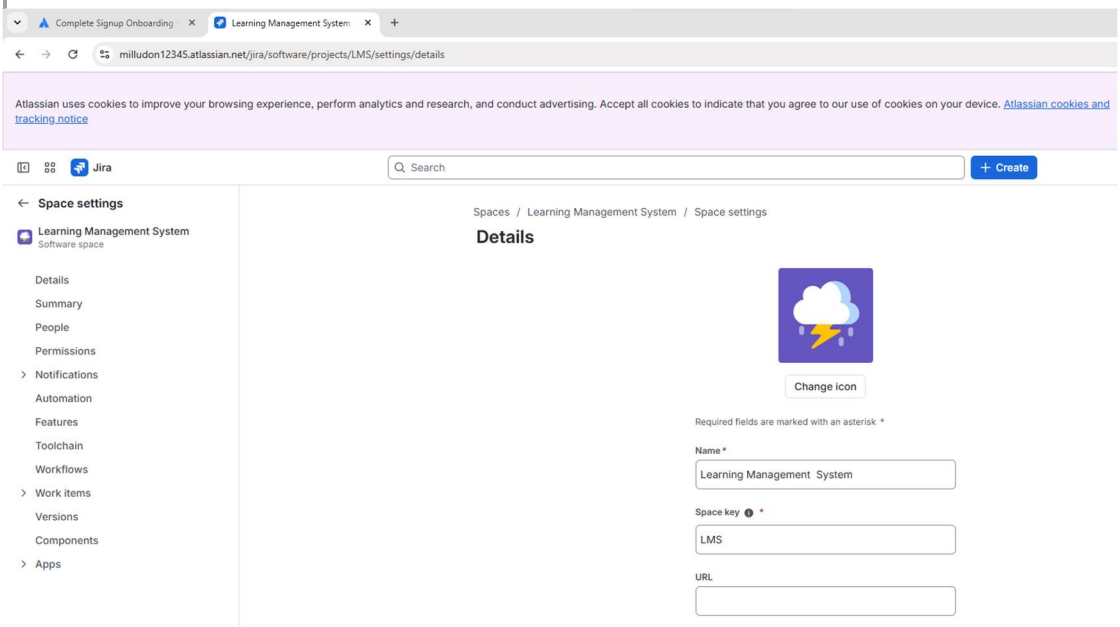

Figure 17. Screenshot from the provided Jira Practical document.

2. Click **Space settings**. The **Details** page opens.
3. Review the fields: **Name**, **Space key**, **URL** and the space icon.
4. (Optional) Click **Change icon**, pick an icon from the gallery and click **Select**.
5. In the **URL** field, type the value given in the data table.
6. Review the left menu of **Space settings**: **Details**, **Summary**, **People**, **Permissions**, **Notifications**, **Automation**, **Features**, **Toolchain**, **Workflows**, **Work items**, **Versions**, **Components**, **Apps**.
7. Click **Save** (if a **Save** button appears after you edit a field). Jira shows a green confirmation banner.

> ***[Screenshot Required]**: The **Details** page of Space settings with Name = Learning Management System, Space key = LMS, the URL field filled, and the left menu visible.*

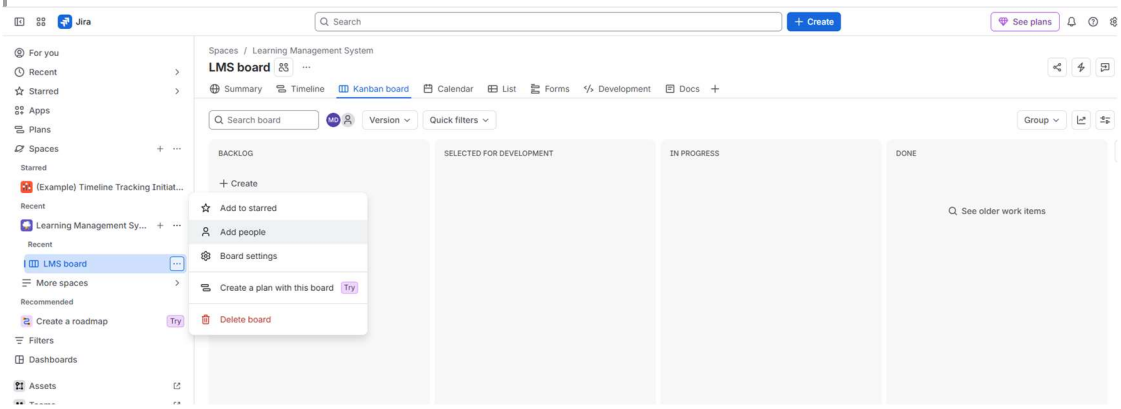

Figure 18. Screenshot from the provided Jira Practical document.

8. Click the back arrow (**<-**) beside **Space settings** to return to the board.

4. Input Test Data and Field Values

Field	Value
Name	`Learning Management System` (unchanged)
Space key	`LMS` (unchanged)
URL	`https://lms.example.com` (sample value)
Icon	Any icon from the gallery (optional)

5. Expected Output and Verification

- Reopening **Space settings** > **Details** shows the saved values.
- The chosen icon appears beside the space name in the sidebar.
- The key `LMS` is unchanged. It prefixes every work item (LMS-1, LMS-2, ...).

Practical 2: Team Creation and Role Assignment

Part A: Add Team Members

1. Aim / Objective

To invite team members to the LMS space by email and give them an initial role.

2. Prerequisites and Tooling

- The LMS space from Practical 1, and your account as its **Administrator**.
- Two valid email addresses (classmates, colleagues or your own alternate Gmail IDs). Invitations are emailed to them.
- Navigation path: **LMS board** > **...** > **Add people**.

3. Step-by-Step Execution Procedure

1. In the left sidebar, click **LMS board** under **Learning Management System**. The Kanban board opens.
2. Click the **...** icon next to **LMS board**.

> ***[Screenshot Required]**: Sidebar menu opened from the **...** beside LMS board, showing Add to starred, **Add people**, Board settings, Create a plan with this board, Delete board.*

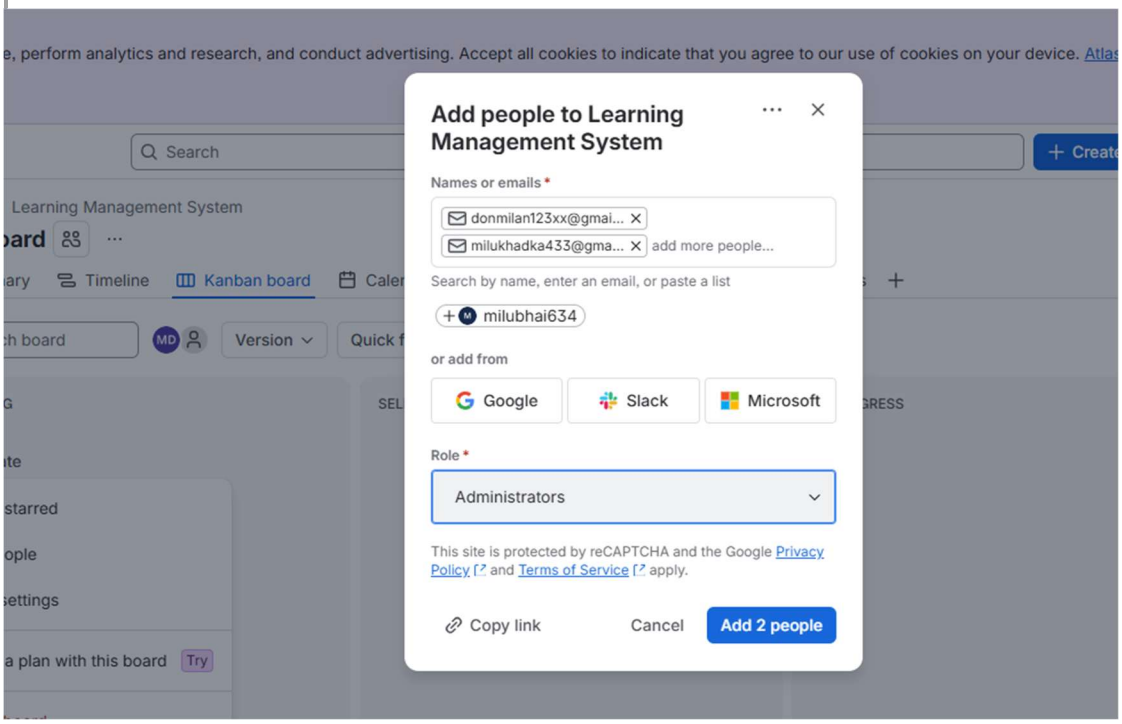

Figure 19. Screenshot from the provided Jira Practical document.

3. Click **Add people**. The **Add people to Learning Management System** dialog opens. (The **+** icon beside the avatars at the top of the board opens the same dialog.)
4. Click the **Names or emails** field and type the first email address from the data table. Press **Enter** to turn it into a chip.

5. Type the second email address and press **Enter**.
6. Open the **Role** dropdown and select **Administrators** (the default shown) or the role named in the data table.

> ***[Screenshot Required]**: The "Add people" dialog with two email chips in **Names or emails**, **Role** set to the chosen role, and the **Add 2 people** button visible.*

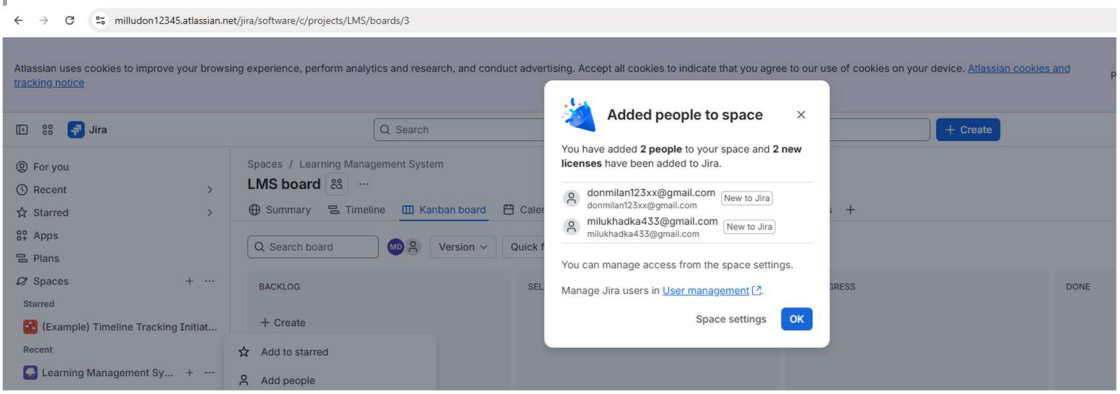

Figure 20. Screenshot from the provided Jira Practical document.

7. Click **Add 2 people**.
8. A confirmation dialog titled **Added people to space** appears. It states how many people and licences were added and lists each email with a **New to Jira** tag. Click **OK**.

> ***[Screenshot Required]**: The "Added people to space" confirmation dialog listing both email addresses with **New to Jira** tags, and the **OK** button.*

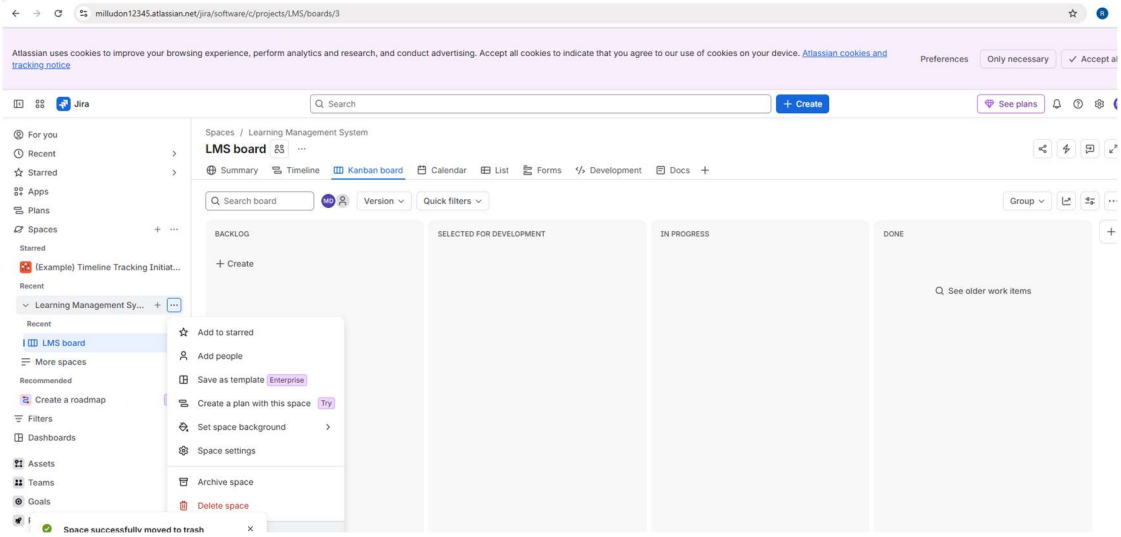

Figure 21. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Field	Value
Names or emails (1)	`member1@gmail.com` (use a real address you control)

Field	Value
Names or emails (2)	`member2@gmail.com` (use a real address you control)
Role	`Administrators` (initial role)
Button	**Add 2 people**

5. Expected Output and Verification

- The confirmation dialog reports **2 people** added to the space.
- Both users receive an invitation email from Atlassian.
- The avatars at the top of the **LMS board** now show additional team members.

Part B: Assign and Modify Roles

1. Aim / Objective

To view the members of the LMS space and change a member's role, then verify that the permissions have changed.

2. Prerequisites and Tooling

- Part A completed, with at least two members in the space.
- Administrator rights on the space.
- Navigation path: sidebar **...** > **Space settings** > **People**.

3. Step-by-Step Execution Procedure

1. In the sidebar, click the **...** next to **Learning Management System**.
2. Click **Space settings**.

> ***[Screenshot Required]**: The space **...** menu with **Space settings** highlighted.*

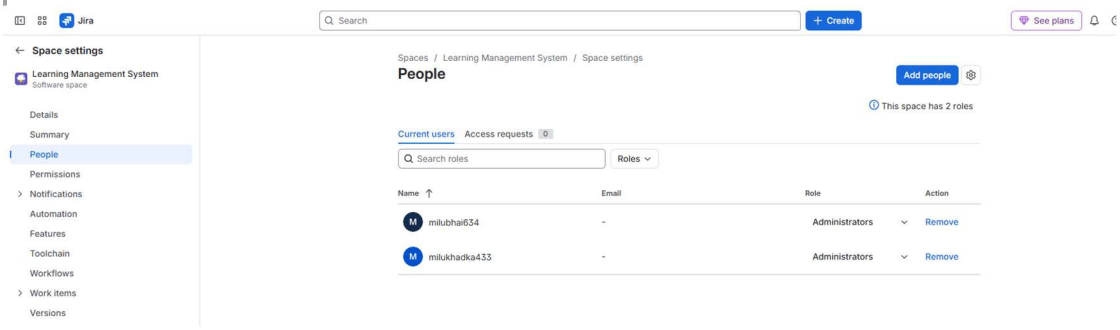

Figure 22. Screenshot from the provided Jira Practical document.

3. In the left menu of **Space settings**, click **People**. The **Current users** tab lists each member with columns **Name**, **Email**, **Role** and **Action**. The header reads "This space has 2 roles".

> ***[Screenshot Required]**: The **People** page with the **Current users** tab, both members listed with the **Administrators** role.*

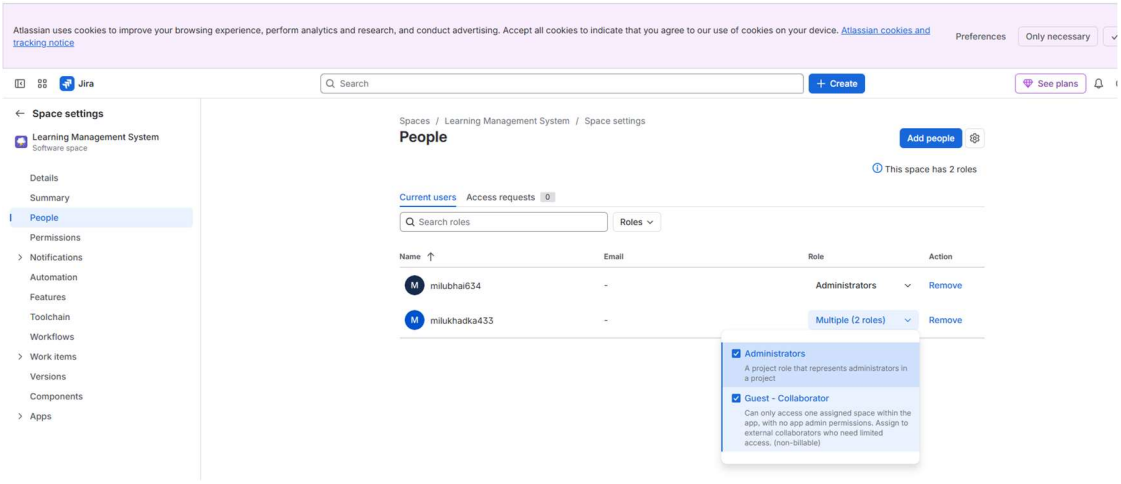

Figure 23. Screenshot from the provided Jira Practical document.

4. In the **Search roles** box (or the name list) locate the second member you added.
5. In that member's row, click the **Role** dropdown (it shows **Administrators**).
6. In the list of roles, tick the role named in the data table. The two available roles are:
    a. **Administrators**: a project role that represents administrators in a project.
    b. **Guest - Collaborator**: can only access one assigned space within the app, with no app admin permissions. Meant for external collaborators who need limited access (non-billable).
7. To make the second member a collaborator only, untick **Administrators** and keep **Guest - Collaborator** ticked. If both are ticked, the role cell reads **Multiple (2 roles)**.

> ***[Screenshot Required]****: The role dropdown open for the second member with both roles listed and the intended checkbox(es) ticked.*

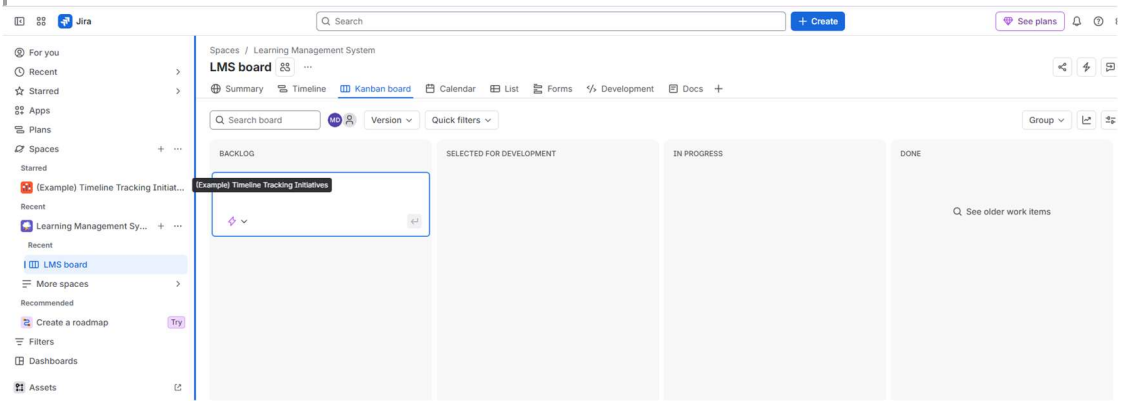

Figure 24. Screenshot from the provided Jira Practical document.

8. Click outside the dropdown to apply. The role cell updates immediately.
9. (Optional) Click **Remove** in the **Action** column only if you wish to remove a test user. Do not remove yourself.
10. Click **Permissions** in the left menu to review what each role may do.

4. Input Test Data and Field Values

User	Original role	New role
You (space creator)	`Administrators`	`Administrators` (no change)
Member 1	`Administrators`	`Administrators` (no change)
Member 2	`Administrators`	`Guest - Collaborator` (untick **Administrators**)

5. Expected Output and Verification

- The **People** page shows Member 2 with **Guest - Collaborator** only. It shows **Multiple (2 roles)** if both roles remain ticked.
- Member 2 cannot open **Space settings**, while an Administrator can.
- Refreshing the page (**F5**) keeps the new role, which confirms it was saved.

Practical 3: Issue Types and Configuration

Part A: Create and Configure Issue Types (Epic, Task, Story, Bug)

1. Aim / Objective

To understand the standard issue types available in a company-managed Kanban space and to create a work item of type **Task** directly from the Backlog column.

2. Prerequisites and Tooling

- The LMS Kanban board (Practical 1) with an empty **BACKLOG** column.
- Navigation path: sidebar **LMS board** > **Kanban board** tab.
- Issue types in this template: **Epic** (large body of work), **Story** (user requirement), **Bug** (defect), **Task** (unit of work), **Subtask** (child of another item).

3. Step-by-Step Execution Procedure

1. In the sidebar, click **LMS board**. Make sure the **Kanban board** tab is active.
2. In the **BACKLOG** column, click **+ Create**. A card opens with the placeholder text "What needs to be done?".

> ***[Screenshot Required]****: The Kanban board with the inline create card open in the* ***BACKLOG*** *column and the placeholder "What needs to be done?".*

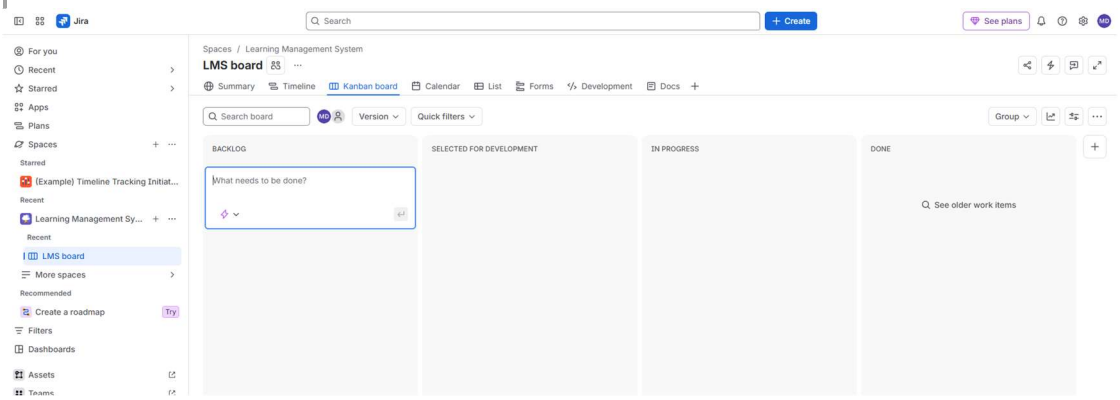

Figure 25. Screenshot from the provided Jira Practical document.

3. In the card, click the **issue type icon** (the small icon with a dropdown arrow at the bottom left). The list shows **Epic**, **Bug**, **Task** and **Manage types**.

> ***[Screenshot Required]**: The issue type dropdown open, listing Epic, Bug, Task and Manage types.*

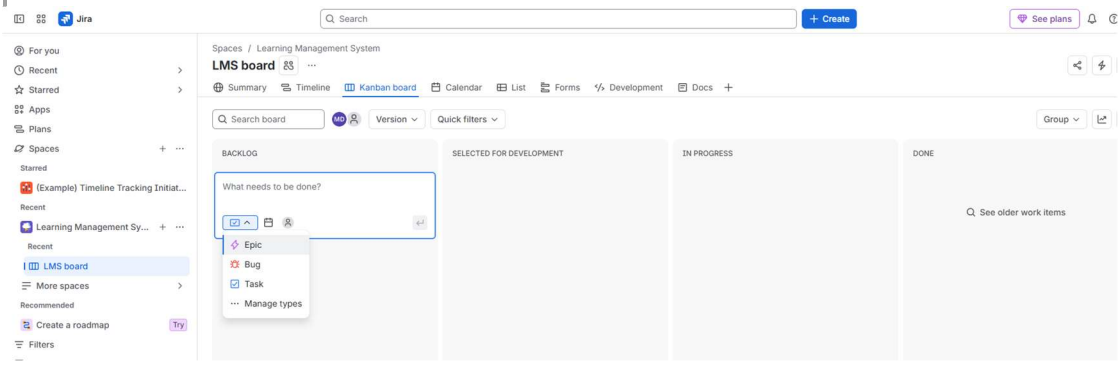

Figure 26. Screenshot from the provided Jira Practical document.

4. Click **Task**.
5. Click in the text area and type `Customer Interaction`.

> ***[Screenshot Required]**: The create card with Customer Interaction typed in and the **Task** icon selected.*

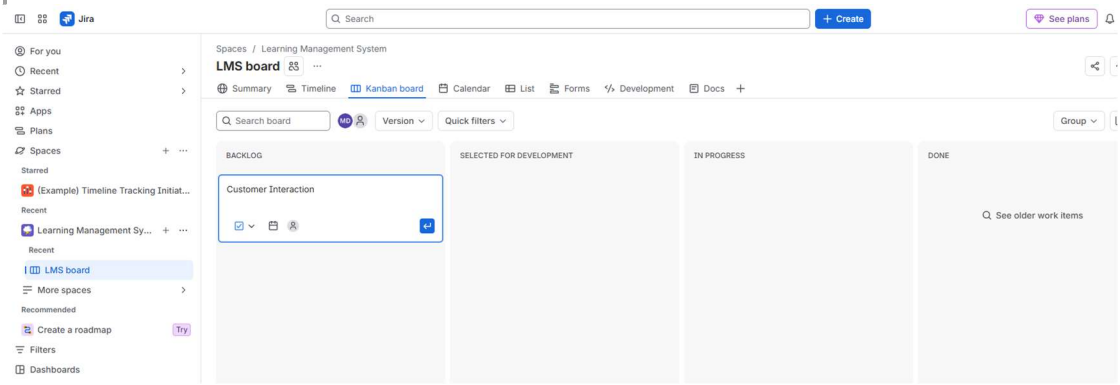

Figure 27. Screenshot from the provided Jira Practical document.

6. Press **Enter** (or click the blue **Enter** arrow at the bottom right of the card).
7. The card **Customer Interaction** appears in the **BACKLOG** column with key `LMS-1`, and the column header shows a count of 1.
8. (Optional) Repeat steps 2 to 6 to create one item each of type **Bug** and **Epic**, using the sample summaries in the data table.
9. (Optional) To review the type list, click **Manage types** in the dropdown, or go to **Space settings** > **Work items** and review the issue types in use.

> ***[Screenshot Required]**: The BACKLOG column with the new card "Customer Interaction", its Task icon and key LMS-1 visible, and the count badge showing 1.*

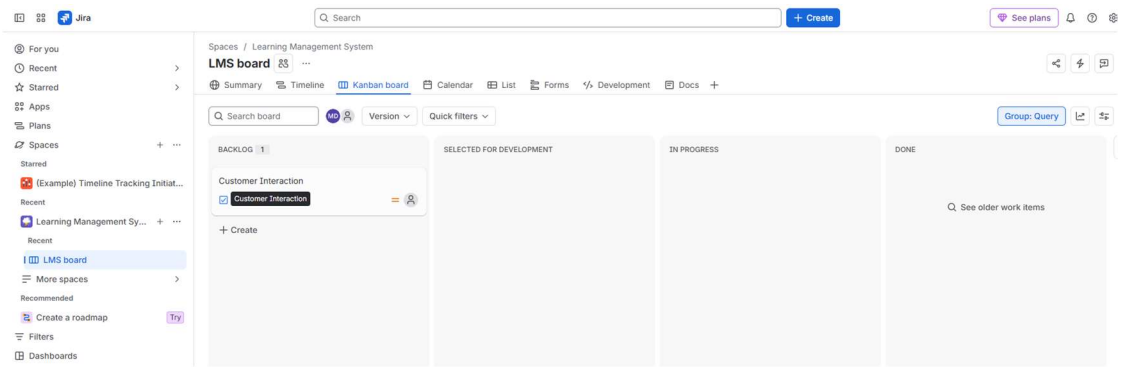

Figure 28. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Issue type	Summary	Expected key
`Task`	`Customer Interaction`	`LMS-1`
`Bug` (optional)	`Login page not loading`	`LMS-2` (the next free number)
`Epic` (optional)	`Course Management`	next free number

If you create the optional items, the keys in Practical 4 move up by the same amount. Note the actual key shown on your board.

5. Expected Output and Verification

- The BACKLOG column contains the card **Customer Interaction** with the **Task** icon.
- Opening the card shows **Work type: Task** and the key `LMS-1`.
- Hovering over the card shows its full summary.

Part B: Create Components and Versions (Releases)

1. Aim / Objective

To create a **Component** that groups work items into a part of the system, and a **Version (Release)** that tracks a planned delivery.

2. Prerequisites and Tooling

- Administrator rights on the LMS space.
- Navigation path: sidebar **...** > **Space settings** > **Components** and **Versions** (shown as **Releases** on the page).

3. Step-by-Step Execution Procedure: Components

1. In the sidebar, click the **...** beside **Learning Management System**.

> ***[Screenshot Required]**: The space actions menu with **Space settings** highlighted.*

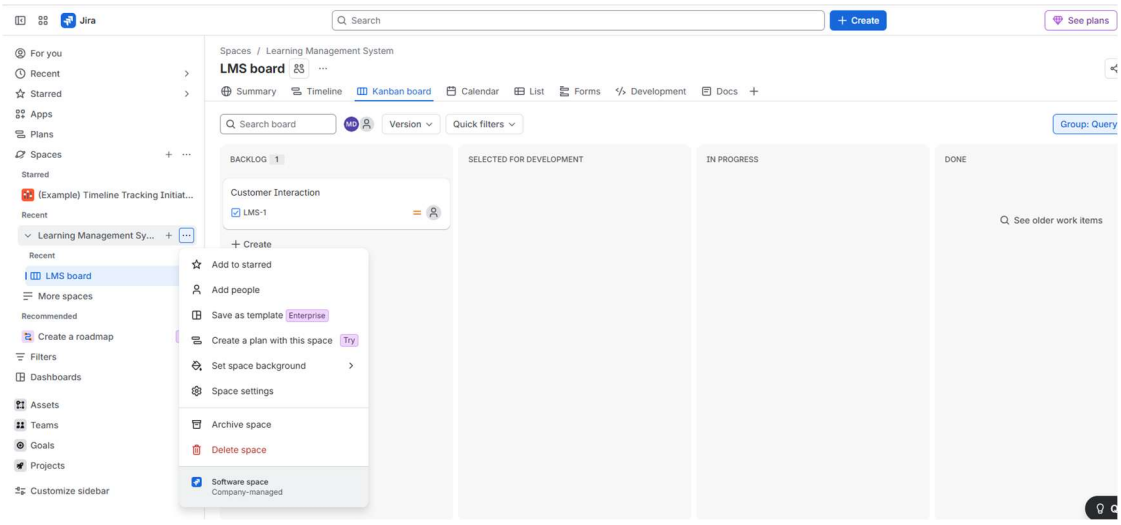

Figure 29. Screenshot from the provided Jira Practical document.

2. Click **Space settings**.
3. In the left menu, click **Components**. The page reads "This space doesn't have any components, yet".
4. Click **Create component**.

> ***[Screenshot Required]**: The empty Components page with the **Create component** button.*

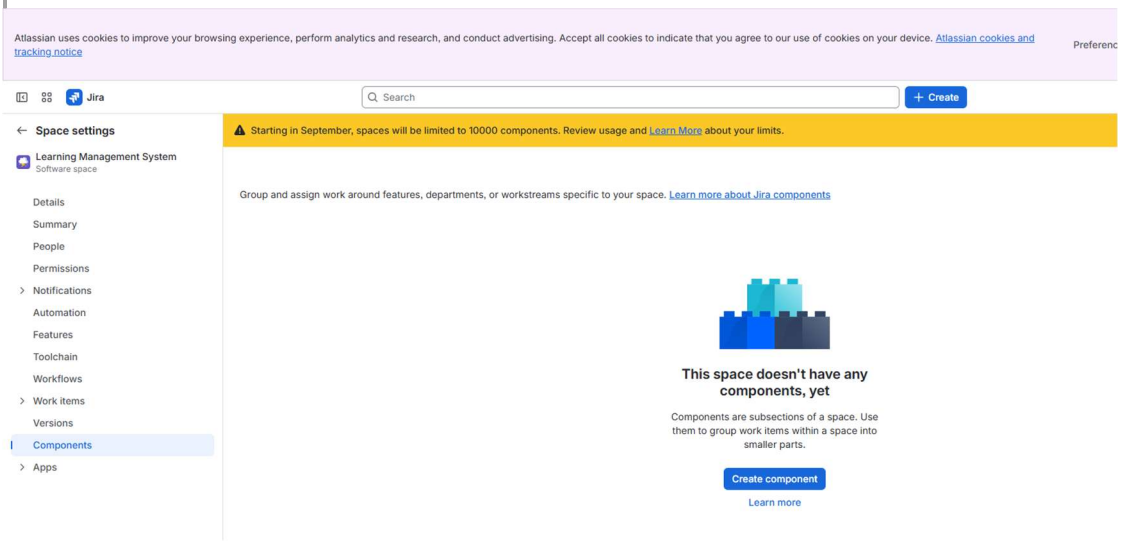

Figure 30. Screenshot from the provided Jira Practical document.

5. In the **Create Jira component** dialog, fill in the fields from the data table: **Name**, **Description**, **Component lead**, **Default assignee**.
6. For **Component lead**, click the dropdown labelled **Select person** and choose your own name (or a team member).
7. For **Default assignee**, keep **Space default**, or choose **Component lead**.
8. Click **Save**.

> ***[Screenshot Required]**: The "Create Jira component" dialog filled with Name = Login and Authentication, Description = User login and authentication, Component lead selected, before clicking **Save**.*

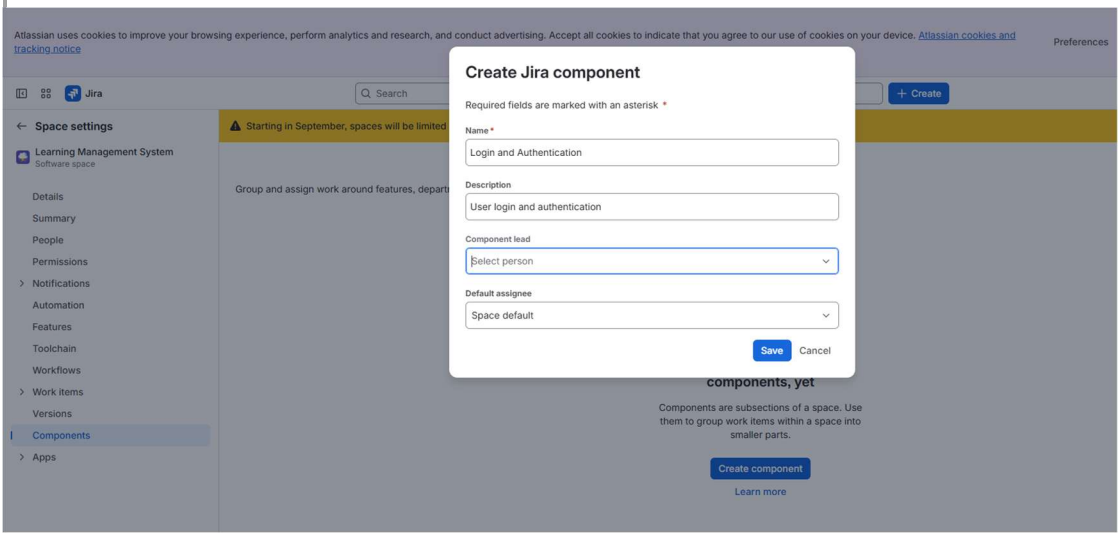

Figure 31. Screenshot from the provided Jira Practical document.

9. The component is listed with columns **Component**, **Description**, **Component lead**, **Default assignee**, **Issues** and **More actions**. The page header reads "This space has 1 component".

> ***[Screenshot Required]**: The Components list showing Login and Authentication, its description, and 0 issues.*

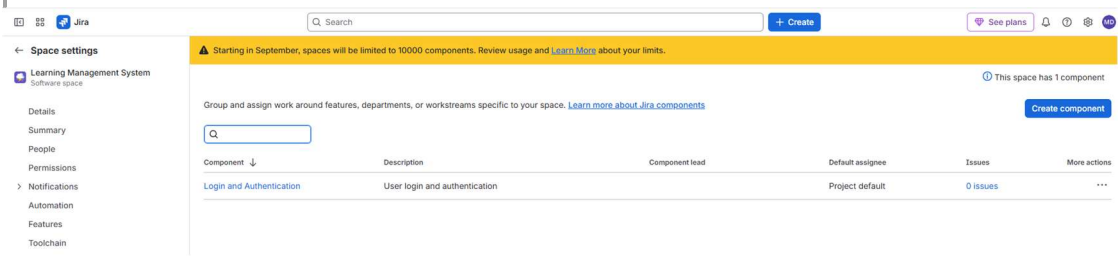

Figure 32. Screenshot from the provided Jira Practical document.

3. (continued) Step-by-Step Execution Procedure: Versions / Releases

10. In the left menu of **Space settings**, click **Versions** (the page title shows **Releases**).
11. Click **Create release** (top right).

> ***[Screenshot Required]**: The Releases page (empty state, "No matching versions") with the **Create release** button.*

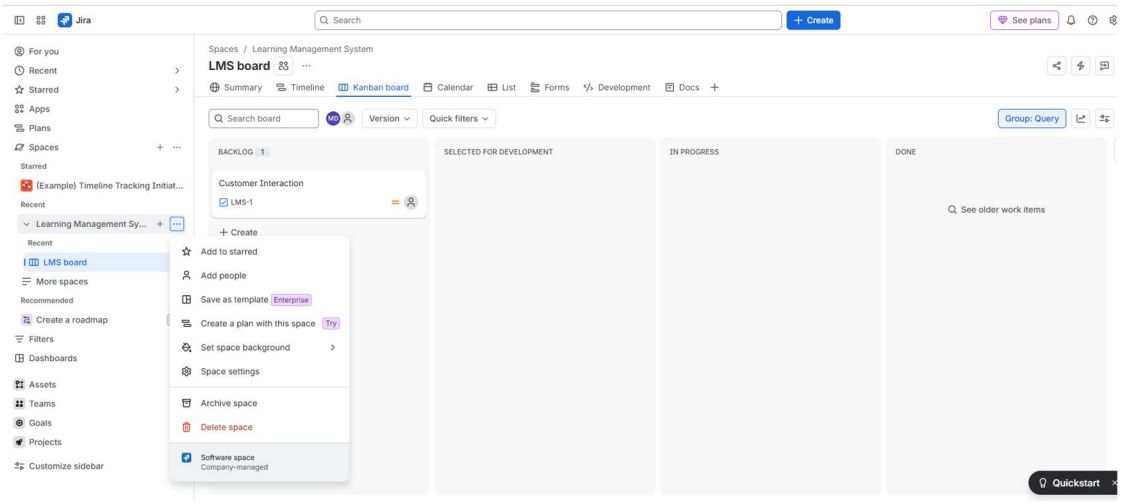

Figure 33. Screenshot from the provided Jira Practical document.

12. In the **Create release** dialog, complete each field using the data table.
13. Under **Release stages**, leave the two default stages in order: **Planned**, then **Released**. To add one, type its name in **Add a stage** and click **Add**.
14. Leave **Require approvals before moving to Released** unticked.
15. Click **Create**.

> ***[Screenshot Required]****: The "Create release" dialog filled with Release name = Version 1.0, both dates, Driver, Description, and stages Planned and Released, before clicking* ***Create****.*

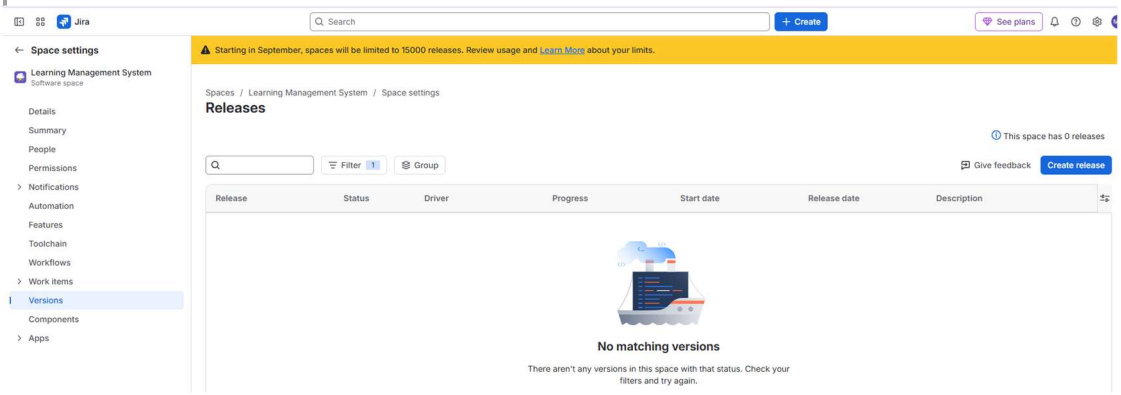

Figure 34. Screenshot from the provided Jira Practical document.

16. If a red **Something went wrong** banner appears, wait a few seconds and check the Releases list before trying again. In the recorded run the release was created despite the banner, and creating again would produce a duplicate.
17. Confirm **Version 1.0** appears in the Releases table.

> ***[Screenshot Required]****: The Releases table with a row for Version 1.0 showing Status (Unreleased), Driver, Progress (No work items) and Description.*

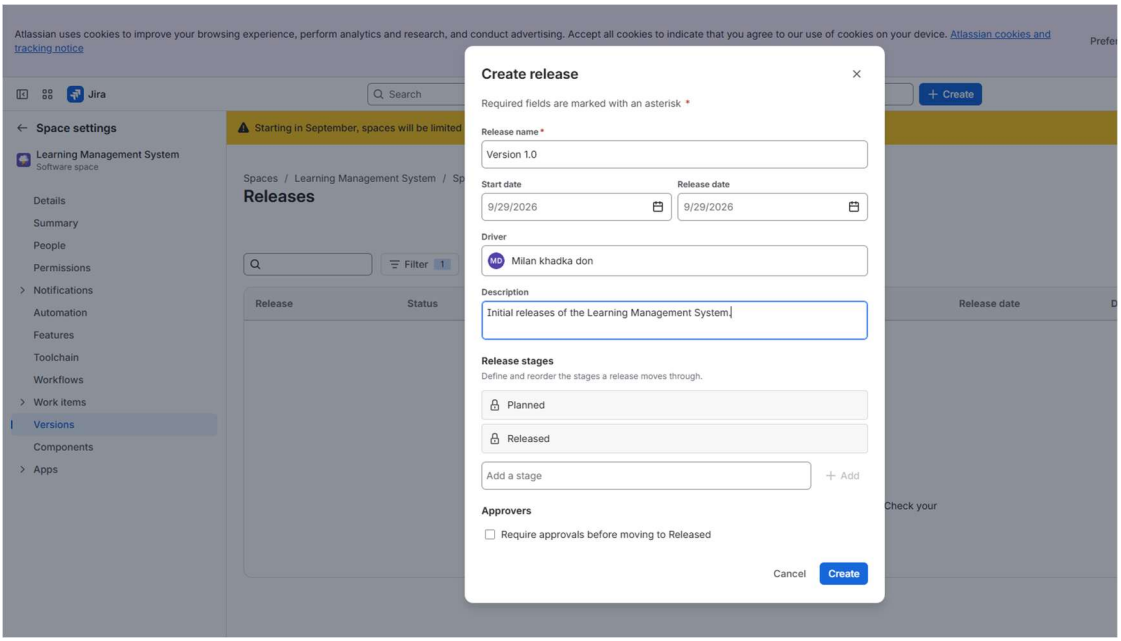

Figure 35. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Object	Field	Value
Component	Name	`Login and Authentication`
Component	Description	`User login and authentication`
Component	Component lead	Your own name (or a team member)
Component	Default assignee	`Space default`
Release	Release name	`Version 1.0`
Release	Start date	Today's date, for example `10/29/2026`
Release	Release date	A future date, for example `12/15/2026`
Release	Driver	Your own name
Release	Description	`Initial release of the Learning Management System`
Release	Release stages	`Planned`, `Released`
Release	Approvers	Not required

5. Expected Output and Verification

- **Components** shows **Login and Authentication** with the description entered and 0 issues.
- **Releases** shows **Version 1.0** with status **Unreleased** and the correct driver.
- Both objects can be chosen later in the **Components** and **Fix versions** fields of a work item.

Practical 4: Issue Management

Part A: Create Issues Under an Epic

1. Aim / Objective

To create an **Epic** on the LMS Kanban board from the Backlog column and confirm that Jira assigns it a work item key.

2. Prerequisites and Tooling

- Practical 3 Part A completed, so that `LMS-1` (Customer Interaction) already exists.
- Navigation path: **LMS board** > **Kanban board** > **BACKLOG** > **+ Create**.

3. Step-by-Step Execution Procedure

1. Open the **LMS board** and make sure the **Kanban board** tab is active.
2. In the **BACKLOG** column, below the existing card, click **+ Create**. A new create card opens.

> ***[Screenshot Required]****: The BACKLOG column with the existing card Customer Interaction (LMS-1) and a new empty create card below it.*

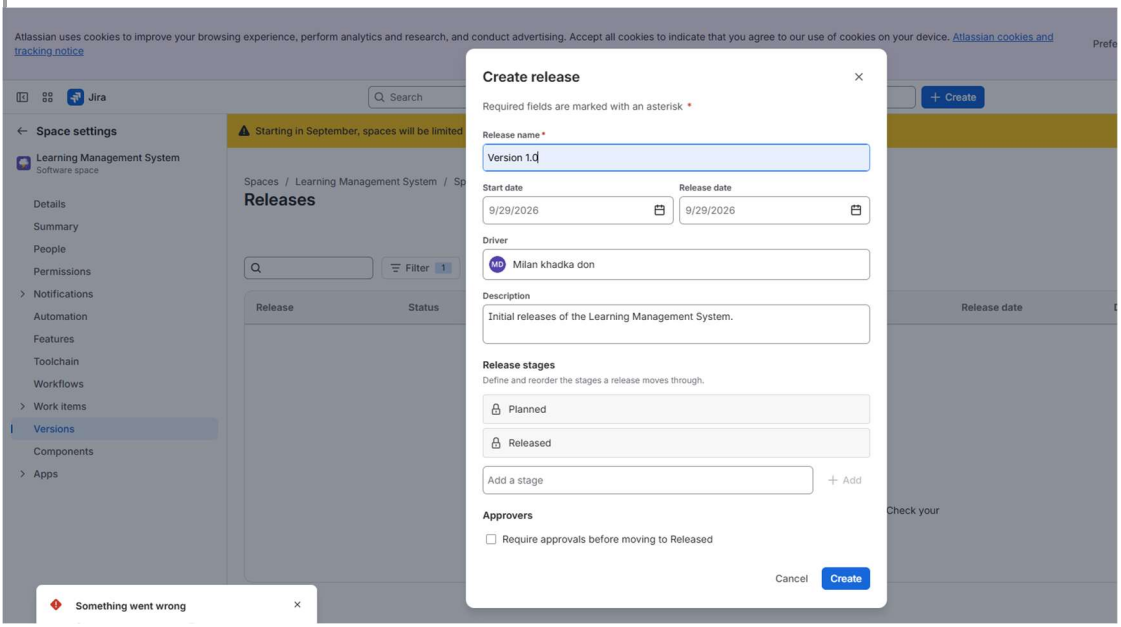

Figure 36. Screenshot from the provided Jira Practical document.

3. Click the **issue type icon** at the bottom left of the card to open the dropdown.
4. Click **Epic**. The icon changes to the purple Epic icon.

> ***[Screenshot Required]****: The issue type dropdown with **Epic** being selected, or the card showing the Epic icon.*

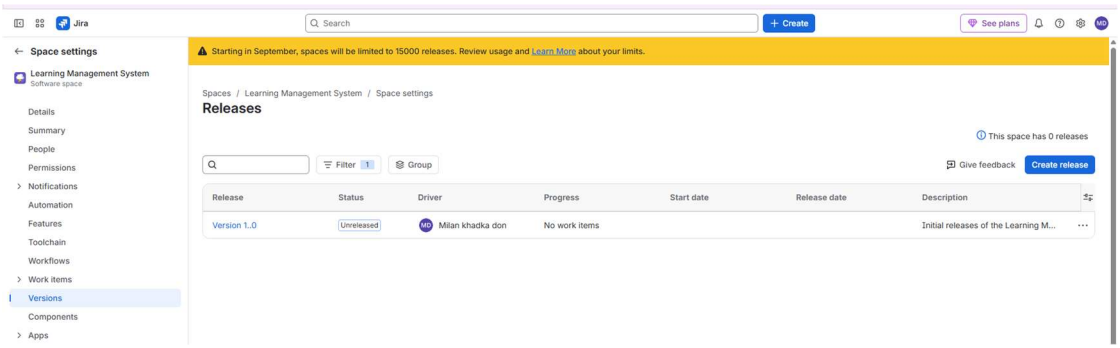

Figure 37. Screenshot from the provided Jira Practical document.

5. In the text area, type `Create Course Upload Form`.
6. Press **Enter**.
7. The Epic card appears in the **BACKLOG** column below LMS-1. The column header count increases to 2.

> ***[Screenshot Required]**: The BACKLOG column showing two cards: Customer Interaction (LMS-1) and the Epic Create Course Upload Form with the purple Epic icon and its key.*

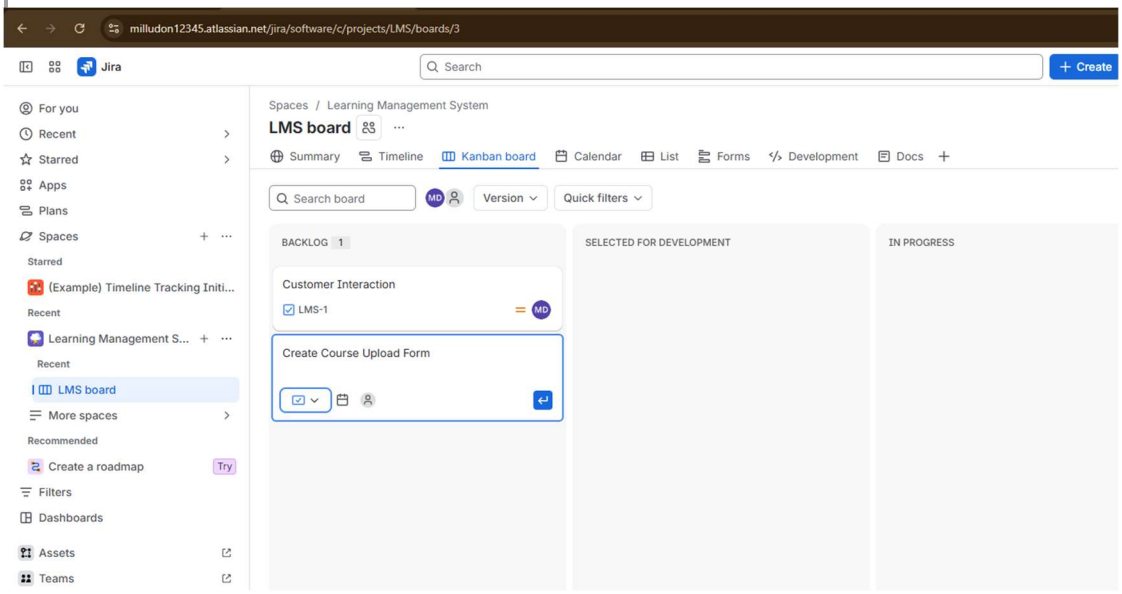

Figure 38. Screenshot from the provided Jira Practical document.

8. Note the key shown on the Epic card (expected `LMS-2`). It will be used in Part B.
9. Optionally, create child work items under the Epic: open the Epic (Part B step 1) and click **Add child work item** to create a **Task** such as `Design upload screen`.

4. Input Test Data and Field Values

Field	Value
Issue type	`Epic`

Field	Value
Summary	`Create Course Upload Form`
Expected key	`LMS-2`
Optional child Task summary	`Design upload screen`

5. Expected Output and Verification

- The **BACKLOG** column holds two items and shows the count **2**.
- The new card carries the Epic icon and the key `LMS-2`. If you created extra items in Practical 3, your key is the next free number.
- A new **Epic** filter chip may appear in the board toolbar, since the board now contains an Epic.

Part B: Assign Issues, Set Priority and Configure Due Date

1. Aim / Objective

To open the detail view of the Epic and set its **Assignee**, **Reporter**, **Priority** and **Due date**, then verify the result on the board.

2. Prerequisites and Tooling

- Part A completed.
- At least one team member from Practical 2 (or yourself) to assign.
- Navigation path: click the Epic card on the board to open its detail view.

3. Step-by-Step Execution Procedure

1. On the **LMS board**, click the card **Create Course Upload Form** (`LMS-2`). The work item detail view opens, with the title and **Description** on the left and the **Details** panel on the right.

> ***[Screenshot Required]****: The detail view of LMS-2 with the Details panel visible: Assignee (Unassigned), Reporter, Labels, Due date, Start date, Priority (Medium).*

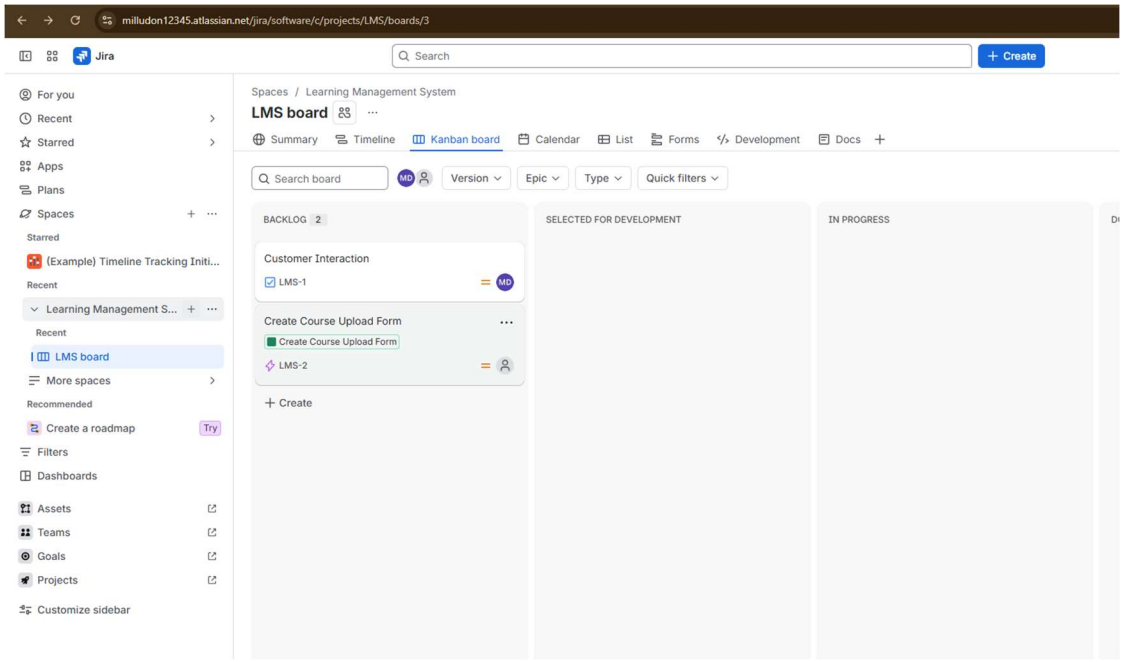

Figure 39. Screenshot from the provided Jira Practical document.

2. In **Details**, click **Assignee**, then select a team member from the list. Click **Assign to me** to assign yourself.
3. Check **Reporter**. It normally shows the person who created the item. If it is blank, click it and choose your name.
4. Click **Priority** and choose **High** from the list.
5. Click **Due date**, open the calendar, and pick the date from the data table. Press **Enter** or click the date.
6. (Optional) Click **Description** and type `Form that lets instructors upload course material.` Click **Save**.

> ***[Screenshot Required]****: The Details panel with Assignee set, Reporter set, Due date filled and Priority showing* ***High****.*

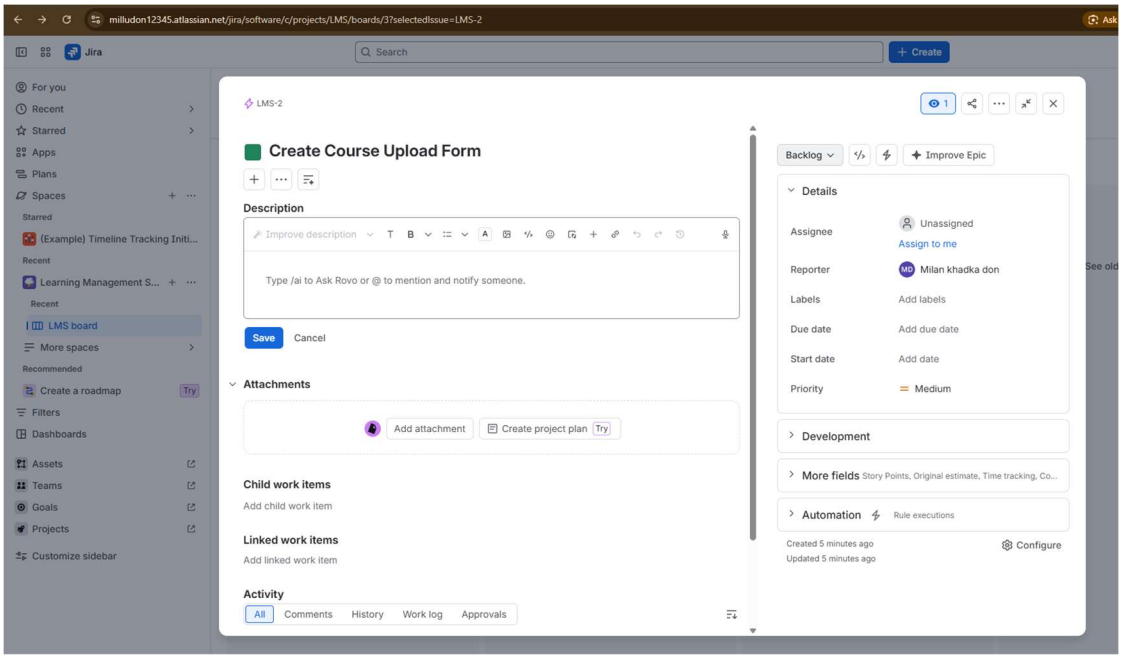

Figure 40. Screenshot from the provided Jira Practical document.

7. Click the **X** (Close) icon at the top right of the detail view.
8. Look at the card on the **Kanban board** and verify the badges: the **due date**, the **priority icon** and the **assignee avatar**.

> ***[Screenshot Required]**: The board after closing the detail view: the Epic card in BACKLOG showing the due date, the High priority icon and the assignee avatar.*

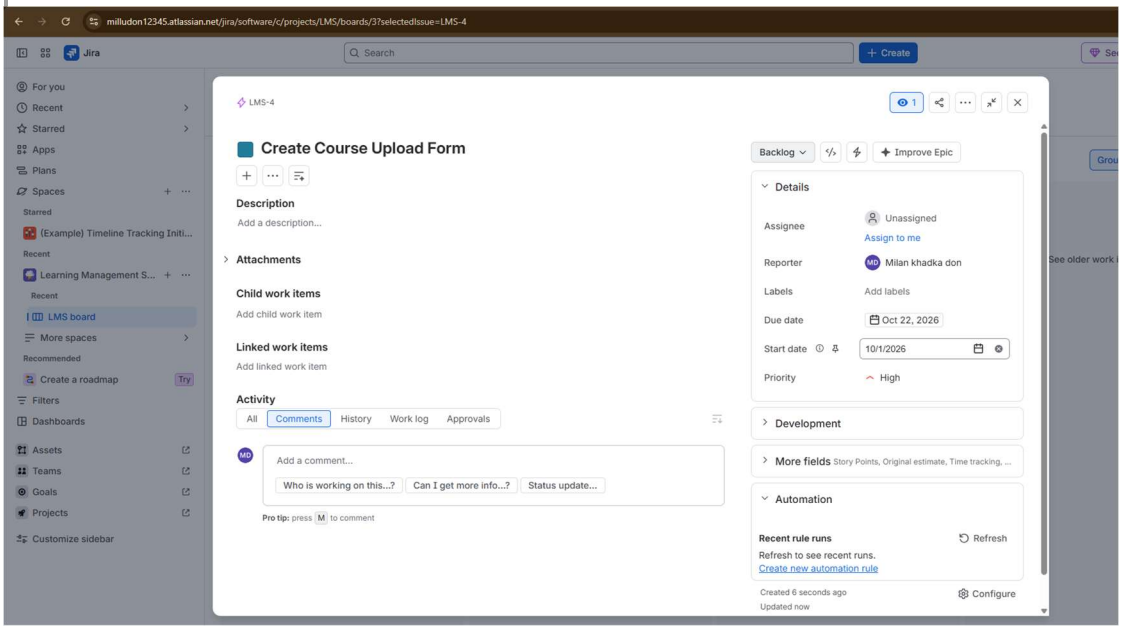

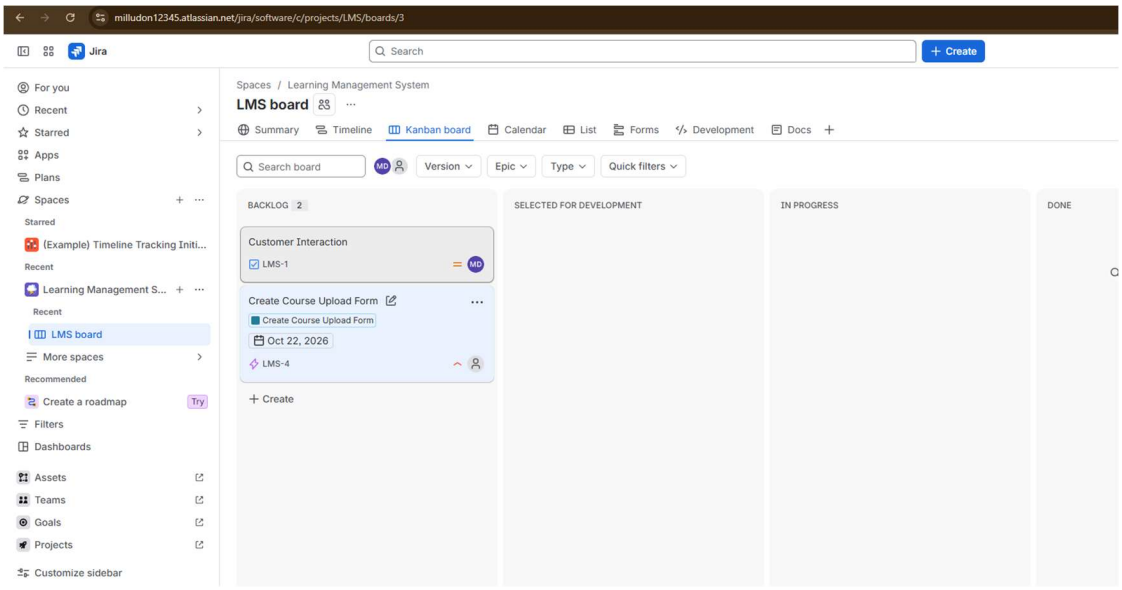

Figure 41. Screenshot from the provided Jira Practical document.

4. Input Test Data and Field Values

Field	Value
Work item	`LMS-2` Create Course Upload Form
Assignee	A team member added in Practical 2 (or yourself)
Reporter	Your own name
Priority	`High`
Due date	A target milestone date, for example `11/30/2026`
Start date (optional)	`10/29/2026`
Description (optional)	`Form that lets instructors upload course material.`

5. Expected Output and Verification

- The detail view shows the chosen Assignee, Reporter, Priority **High** and the Due date.
- The card on the Kanban board displays the due date and the priority and assignee icons.
- Opening the **Activity** > **History** tab lists each change with a timestamp.
- A new due date shows in the **Calendar** tab of the board on the selected day.

Additional reference screenshot 42 from the provided Jira Practical document.
